

Clinical Coding for CRS Standards

The following appendices set out the amended PRIMARY DIAGNOSIS coding structure to be used for the monitoring of cancer waiting times following the implementation of 4th Revision of ICD-10 on 01 April 2012 (see AMD 86/2010).

Appendix A: Exclusion of Basal Cell Carcinoma from the Dataset

When entering data for patients with a diagnosis coded within ICD-10 C44.0 to C44.9 it is important that patients diagnosed with Basal Cell Carcinoma are excluded from the data-set as they are not covered by the cancer waiting times targets that are to be met by 2005.

Therefore any definitions of the cancer types that are not to be entered onto the system will have to be defined by the morphology code of the particular neoplasm type as ICD-10 section C44 is classified by affected body area, for example, C44.1 Skin of Eyelid.

The table below specifies cancer types/sites to be excluded from the dataset:

Specified Neoplasm	ICD-10 Classification	Morphology Code
Basal Cell Carcinoma	C44	M8090/3
Multicentric Basal Cell Carcinoma	C44	M8091/3
Basal Cell Carcinoma, Morphoea	C44	M8092/3
Basal Cell Carcinoma, Fibroepithelial	C44	M8093/3
Basosquamos Carcinoma	C44	M8094/3
Metatypical Carcinoma	C44	M8095/3
Pilomatrix Carcinoma	C44	M8110/3

If there is any problem removing a single neoplasm type from your dataset based upon the above information please consult the Basal Cell Neoplasm's section of ICD-O, which can be found under morphology codes M809-M811. No information for any patient diagnosed with a neoplasm that is contained within this section should be entered onto the system.

Note: Basal Cell Carcinoma information is required for Cancer Registry purposes.
