

Data Alliance Partnership Board

Information Standards Notice – Deprecation

Details are given below of the deprecation of an information standard formerly approved by the Information Standards Board for Health and Social Care (ISB).

This deprecation has been accepted by the Data Alliance Partnership Board (DAPB), a successor of previous information standards governance and approval boards (ISB, SCCI, DCB)

Enquiries about this notice should be directed to the contact specified below.

Standard details	
ISB identifier and name	This deprecation is of the Information Standards Board (ISB) approved information standard, ISB 0066: Renal Data Set .
Date of DAPB meeting	This deprecation was formally accepted at the June 2022 meeting of the Data Alliance Partnership Board (DAPB). Items which are deprecated still have some value and may still be used with caution but are no longer being maintained and supported. There is an assumption that a replacement standard or guidance will be published (although not guaranteed) and that on such publication, the deprecated item will be formally withdrawn.
Background	
	<p>ISB 0066 was first published in 2009 (DSCN 27/2008). The purpose of the data set was to define the information required to support the implementation of the National Service Framework (NSF) for Renal Services and support the generation of person-based secondary-use data relating to renal services in England.</p> <p>The last update to ISB 0066 (Amd 43/2010) was published in September 2012. Since that date, the information standard has not maintained currency with changes in clinical terminology, practice, and associated definitions</p> <p>In 2019, the NHS Data Model and Dictionary service undertook a review of legacy data sets contained within the NHS Data Dictionary. The data set for ISB 0066, the National Renal Data Set, was identified as out of date and it was retired from the Data Dictionary in October 2019.</p>

Data Alliance Partnership Board

	<p>The DAPB have sought to identify a Sponsor to review the current standard and uplift the content, which is now ten years out of date, but no contact has been identified. The DAPB is therefore deprecating this standard to ensure user awareness of the risks of continued use. Formal retirement of ISB 0066 will take place on 31 March 2023 and a Retirement Information Standards Notice (ISN) will be issued to confirm the retirement.</p> <p>Note that the deprecation of this standard, and the forthcoming retirement, has no impact on data returns made to the UK Renal Registry.</p>
Link to further documentation	Documents relating to the implementation of ISB 0066 are available on the archived ISB website .
