Title	Mental Health Services Data Set Change Specification		
SCCI Reference	SCCI 0011 Amd 12/2015		
Sponsor	Sarah McClinton	Status	Final
Developer	Nicholas Richman	Version	1.3
Implementation Manager	Netta Hollings	Version Date	10/07/2015 (corrected 01/03/2018)

Mental Health Services Data Set v1.0 Change Specification

This information standard (SCCI0011) has been approved for publication by NHS England under [section 250 of the Health and Social Care Act 2012](#).

Assurance that this information standard meets the requirements of the Act and is appropriate for the use specified in the specification document has been provided by the Standardisation Committee for Care Information (SCCI), a sub-group of the National Information Board.

This information standard comprises the following documents:

- Requirements Specification
- Change Specification (this document)
- Implementation guidance.

An Information Standards Notice (SCCI0011 Amd 12/2015) has been issued as a notification of use and implementation timescales. Please read this alongside the documents for the standard.

The controlled versions of these documents can be found on the [HSCIC website](#).

Date of publication 16 July 2015.

Amendment History:

Version	Date	Amendment History
1.0	13/05/2015	For submission to SCCI Development Support
1.1	27/05/2015	Uplift following Development Support review prior to ISAS submission
1.2	10/07/2015	Amendments to enable publication following Extraordinary SCCI meeting 09/07/2015
1.3	01/03/2018	Review and correction of broken hyperlinks

Approvals:

Name	Title/Responsibility	Version	Date
Nicholas Richman	Developer	1.2	10/07/2015
Netta Hollings	Implementation Manager	1.2	10/07/2015
Rebecca Lee	Developer	1.3	01/03/2018

Glossary of Acronyms:

Acronym	Definition
AT	Assuring Transformation
BSP	Bureau Service Portal
CDS	Commissioning Data Sets
CYPHS	Children and Young People's Health Services
CYP IAPT	Children and Young People's Improving Access to Psychological Therapies
DH	Department of Health
DSCN	Dataset Change Notice (now referred to as ISN)
EPR	Electronic Patient Records
HSCIC	Health and Social Care Information Centre
ISB	NHS Information Standards Board for Health and Social Care
ISN	Information Standards Notice (formerly known as DSCN)
LDC	Learning Disabilities Census
MHCC	Mental Health Care Clusters
MHCT	Mental Health Clustering Tool
MHLDDS	Mental Health and Learning Disabilities Data Set
MHMDS	Mental Health Minimum Data Set
MHSDS	Mental Health Services Data Set
MPI	Master Patient Index

ODS	Organisation Data Service
PAS	Patient Administration System
SCCI	Standardisation Committee for Care Information
TOS	Technical Output Specification

Glossary of Terms:

Term	Definition
Data Item	A single component of a data set that holds one type of information and relates to a specific record. Each data item is unique to the data set.
Data Set Specification	Specification for the output data set which is part of the ISN and published on the SCCI website
Information Standards Notice (ISN)	Information Standards Notices (ISNs) previously known as Data Set Change Notices (DSCNs) are issued by the Standardisation Committee for Care Information (SCCI) to give notice of changes to information requirements and information standards used by the NHS and Social Care Services.
Mental Health	The term 'mental health' includes patients of all ages (i.e. adults, adolescents and children) and is used generically to include patients with a learning disability or autism spectrum disorder as well as other mental health needs.
NHS Information Standards Board for Health and Social Care (ISB HaSC)	This is the body that preceded the Standardisation Committee for Care Information (SCCI) as the approver for information standards.
Standardisation Committee for Care Information (SCCI)	The Standardisation committee for Care Information (SCCI) is a committee with membership drawn from a range of health and social care organisations with responsibility for overseeing the development, assurance and approval of information standards, data collections and data extractions used within the health and social care system.

1 Overview

1.1 Summary

Standard	
Standard Number	SCCI0011
Standard Title	Mental Health Services Data Set
Description	<p>The Mental Health Services Data Set (MHSDS) is a change to the Mental Health and Learning Disabilities Data Set (MHLDDS) standard, which supersedes and replaces this and the following standards:</p> <ul style="list-style-type: none"> • ISB 1072 Child and Adolescent Mental Health Services (CAMHS) data set • ISB 1509 Mental Health Care Cluster • ISB 1078 Mental Health Clustering Tool <p>MHSDS will also incorporate requirements in support of Children and Young People's Improving Access to Psychological Therapies (CYP IAPT), elements of the Learning Disabilities Census (LDC) and elements of the Assuring Transformation (AT) Information Standard.</p> <p>The MHSDS is a patient level, output based, secondary uses data set which will deliver robust, comprehensive, nationally consistent and comparable person-based information for children, young people and adults who are in contact with Mental Health Services. As a secondary uses data set it intends to re-use clinical and operational data for purposes other than direct patient care. It defines the data items, definitions and associated value sets to be extracted or derived from local information systems.</p> <p><u>In Scope</u></p> <p>All activity relating to people who receive specialist secondary mental health care services and have, or are thought to have a mental illness; or who receive specialist secondary learning disabilities or autism spectrum disorder services and are thought to have a learning disability or autism spectrum disorder are within scope of the MHSDS.</p> <p>The scope of the data set requires record level data submission from services as follows.</p> <p>For each person:</p> <ul style="list-style-type: none"> • if the person is wholly funded by the NHS – data submission for that person is mandatory; • if the person is partially funded by the NHS – data submission for that person is mandatory; • if the person is wholly funded by any means that is not NHS – data submission is optional. <p>It may be that the person has:</p> <ul style="list-style-type: none"> • A mental illness

	<ul style="list-style-type: none"> • A learning disability • An autism spectrum disorder • Any combination of mental health, learning disability or autism spectrum disorder needs. <p>Children and adolescents (including those with a learning disability and/or autism spectrum disorder) under the age of 18 should also be included where they are in receipt of care from a specialist secondary mental health, learning disabilities or autism spectrum disorder service or an early intervention service. Children and young people in receipt of psychological therapies covered under the CYP IAPT programme are included within the scope of this standard.</p> <p>The standard will be used across a range of service types, which are likely to include:</p> <ul style="list-style-type: none"> • Acute services • Long-term conditions services • Hospital for mental health/learning disabilities • Rehabilitation services • Care home with nursing • Care home without nursing • Community services offering secondary care to children <p><u>Out of Scope</u></p> <p>The following areas are currently out of scope and should consequently not be included within MHSDS:</p> <ul style="list-style-type: none"> • Patients receiving treatment through a specialist mental health, learning disabilities or autism spectrum disorder care provider but not thought to have a mental illness, learning disability or autism spectrum disorder e.g. <ul style="list-style-type: none"> ○ Smoking cessation services ○ Addictions and substance misuse services ○ Some alternative therapy services ○ Some counselling services • Mental Health, learning disabilities, and autism spectrum disorder services provided only at a primary care level (such as by GPs or adult Improving Access to Psychological Therapies).
<p>Benefits</p>	<p>A combined mental health data set, replacing the existing MHLDDS and the CAMHS data set will reduce the burden on care providers and system suppliers who will only have to make one data submission per month. Combining the data sets also reduces burden for the HSCIC in having to maintain two separate data sets and landing platforms, and removes the artificial division between adult and children’s mental health services that having two separate data sets creates.</p> <p>The data structure has been aligned with other data sets such as the Children and Young People’s Health Services (CYPHS) data set. These changes further reduce the burden on providers who deliver children’s community and mental health care, and enables equitable analysis through the alignment of the key data set concepts (e.g. referrals, contacts and activities).</p>

	<p>The access and waiting standard for Early Intervention in Psychosis (EIP) is being introduced in 2015/16 for delivery from 1st April 2016. The referral-based structure of the MHSDS enables the reporting of this information.</p> <p>The introduction of clinical terminology will enable the standardised capture of concepts as they are recorded by the clinician. This improves data quality and reduces burden by removing the requirement for providers to map these concepts to pre-determined classifications enabling providers to flow the data as it is captured locally, with the HSCIC performing any required mapping. The HSCIC is then able to report at a detailed level whilst still being able to derive higher-level terms using the SNOMED hierarchy for use in the development of national publications.</p> <p>The inclusion of elements of CYP IAPT, AT and LDCdata will improve the reporting for these important areas and support the eventual removal of these separate data collections which are currently ongoing but due to come to an end.</p>
Applies to	<p><u>Patients</u></p> <p>Any patient (adult, adolescent or child) who receive specialist secondary mental health care services and have, or are thought to have a mental illness; or who receive specialist secondary learning disabilities or autism spectrum disorder services and are thought to have a learning disability or autism spectrum disorder.</p> <p>Where a service is wholly or partially made up of NHS funded patients, data set submission is mandatory. Where the service is wholly made up of non-NHS patients data set submission is optional.</p> <p><u>Organisation and Service Types</u></p> <p>The standard will be used across the range of Service Providers and organisations that provide specialist secondary mental health and/or learning disabilities and/or autism spectrum disorder services (irrespective of funding arrangements) including:</p> <ul style="list-style-type: none"> • NHS Mental Health Trusts • NHS Learning Disabilities Trusts • NHS Acute Trusts¹ • NHS Care Trusts¹ • Independent sector providers offering a service model that includes NHS funded and non-NHS funded patients^{Error! Bookmark not defined.} • Any qualified provider offering specialist secondary mental health, learning disabilities or autism spectrum disorder services • Community services offering secondary care to children <p><u>Departments</u></p> <p>The standard must be read and used by all Heads of Mental Health services, and other clinical and support services, including community services, that have an active involvement in delivering secondary mental health care.</p>

¹ Where there is direct provision of specialist secondary mental health, learning disabilities, or autism spectrum disorder services

	<p><u>Professionals</u></p> <p>The standard applies to all professions working in or supporting Mental Health services and other services offering secondary mental health care including community services. The MHSDS Technical Output Specification provides an indication of the care professionals that are within the scope of this information standard.</p> <p><u>IT Systems</u></p> <p>The standard predominantly, but not exclusively, relates to Mental Health Systems, Patient Administration Systems (PAS) and Electronic Patient Records (EPR).</p>
Impact on Existing Information Standards	<p>In terms of the progression through the SCCI process, this is technically a change to the existing MHLDDS standard (ref: ISB 0011), which will require the retirement of the CAMHS standard (ref: ISB 1072), so that the two data sets can be combined into the MHSDS. The Mental Health Care Cluster standard (ref: ISB 1509) and the Mental Health Clustering Tool standard (ref: ISB 1078) will both be retired as the requirements of these standards will be transferred into the MHSDS ISN.</p> <p>The CYPHS data set (ref: ISB 1069) shares a similar data structure to the MHSDS with approximately 50% of the structure being common to both data sets. This is intentional as a common structure supports organisations that provide Mental Health and Community Services by reducing the burden of collection and enabling equitable analysis across both settings. In the future there will be an impact of making changes to either the CYPHS or MHSDS standard due to this alignment but this has been considered and mitigated where possible as part of the design of both data sets.</p> <p>There is a minor impact on other standards due to data items being modified which are used in other data set. The majority of these changes affect the Children and Young People's Health Services (CYPHS) data set (SCCI 1069) which was developed by the same team and as such the same data items have been used where appropriate.</p> <p>The changes also support the SNOMED CT Information Standard (ref: ISB 0034). The feedback from providers and system suppliers is that introduction of SNOMED CT will eliminate the burden of mapping the existing assessment tools. The feedback has been evidenced via public consultation and planned provider/system supplier events and site visits.</p> <p>The introduction of clinical terminology will enable providers to flow data as captured by clinicians locally, without the need to map to a pre-determined value list defined in the ISN. Existing data value-based data items remain to support providers that do not have clinical terminology-enabled systems. The move to clinical terminology will reduce the burden on providers by reducing the amount of mapping they need to complete locally.</p>
Release	
Release Number	Amd 12/2015
Release Title	Mental Health Services Data Set (MHSDS) Version 1.0

Description	<p>Formerly known as the Mental Health and Learning Disabilities Data Set (MHLDDS v1.1), the standard has been renamed the Mental Health Services Data Set (MHSDS) following a scope expansion to include the CAMHS data set.</p> <p>The changes for the MHSDS in comparison to the previous MHLDDS and CAMHS data set are as follows:</p> <ul style="list-style-type: none"> • Creation of a common structure in line with the referral-contact-activity structure of the Children and Young People's Health Services (CYPHS) data set, requiring the removal and addition of some data items and values, in order to support the flow of children and adult Mental Health Services data. • Addition of new data tables and items to enable the flow of clinical terminology, including SNOMED CT (for example, Coded Scored Assessment tables). • Incorporation of data items from the CYP IAPT data set. • Incorporation of data items to enable the capture of learning disabilities census and Assuring Transformation data. • Renaming of data items to conform to the NHS Data Model and Dictionary. • Inclusion of additional data quality metrics to support validity of the data set. • Incorporation of Mental Health Care Clusters
Implementation Completion Date	<p><u>System Suppliers</u></p> <p>From 1st January 2016, Mental Health systems MUST be fully conformant with this standard.</p> <p><u>Care Providers</u></p> <p>From 1st January 2016 providers of Mental Health Services as defined in this Information Standard MUST be able to collect the information as defined in the Technical Output Specification for local use.</p> <p>From 1st February 2016, providers of NHS-funded Mental Health Services MUST begin submitting MHSDS submissions in accordance with this standard.</p>
Full Conformance Date	21 st February 2016

2 Change Specification

2.1 Reason for change

The MHSDS applies to, and is used by, a wide range of stakeholders. The content of the data set is determined from consultation with these stakeholders which include various sections of Department of Health policy, NHS England, Care Quality Commission, service providers and commissioners.

Change to the MHLDDS data set is required to ensure the data set remains fit for purpose and includes development of new data items, amendment of existing data items and removal of obsolete items. It also involves creation of new tables, amendment to existing tables and removal of obsolete tables. Changes have been made in order to support the following objectives:

Restructuring – Alignment to common data set structure

In order to reduce burden and simplify the data submission process for providers, a need has been identified to develop a common structure to the community and mental health data sets. The common structure needs to be capable of supporting analysis and reporting in relation to complex concepts, such as waiting times. In order to support this requirement a programme of restructuring the affected data sets has been undertaken, and where appropriate, merging the data sets to reduce the number of submissions required.

The effect this has had on the MHLDDS is to restructure from a ‘spoked wheel’ model, to a ‘referral-contact-activity’ model. What this means is that, instead of the focus of the data set being the patient, with every other table being associated with the patient through a (pseudonymised) patient identifier; the focus of the data set is a core of tables relating to the patient, referral and contact. The additional tables are primarily attached via a patient identifier or service request identifier which are the primary keys in the Master Patient Index table and Referral table respectively. The ‘spoked wheel’ of the MHLDDS can be seen on the [MHLDDS web pages](#). The proposed MHSDS structure in a ‘referral-contact-activity’ format can be seen in the data model included with the MHSDS SCCI submission.

Clinical Terminologies

“SNOMED CT is an international clinical terminology that provides machine readable codes for clinical concepts; the clinical concepts being also represented in a consistent and human readable form through descriptions.” ([From ISN.](#)) The advantages of SNOMED CT include the ability to record information in a standard way across systems and the ability to make quick, low burden changes to code sets. SNOMED CT is a mandated standard with full implementation date of April 2015. Due to deprecation arrangements this means that system suppliers should currently be working towards enabling the capture of SNOMED CT terms in their systems. The ability to flow clinical terminologies, including SNOMED CT, in the MHSDS has been developed to:

- Allow flexibility with regard to the flow of outcome tools: The ability to add tools to the requirements or remove them based on policy requirement; clinical practice; and licencing arrangements.
- Allow flexibility with regard to the collection of interventions information: any code can flow, but the analysis team can filter in order to report as required without the need for a new ISN.

- Allow flexibility with regard to the collection of care contact activity: guidance can be used to ensure certain activities flow such as smoking status, however should an additional activity come into scope, a new ISN would not be required as for previous versions of the MHLDDS.

To enable the flow of clinical terminology, including SNOMED CT, a number of new data items and tables have been added across the model. For example, the Coded Scored Assessment tables allow data flow for the MHLDDS and CAMHS assessment tools to continue but support the submission of this data using SNOMED CT.

CYP IAPT

“The Children and Young People’s Improving Access to Psychological Therapies programme (CYP IAPT) is a service transformation programme delivered by NHS England that aims to improve existing Child and Adolescent Mental Health Services (CAMHS) working in the community.” ([CYP IAPT Web Site](#)) There is now requirement to flow CYP IAPT data through a national data set following piloting for a number of years, in order to support the aims of the CYP IAPT programme. The MHSDS incorporates the information requirements of the CYP IAPT data set. Due to the large number of assessment tools included in the CYP IAPT Data Set, this was also a key driver for moving to the Coded Scored Assessment table format.

Learning Disabilities

The Learning Disability Census and Assuring Transformation Collection represent additional data flows to the current MHLDDS flow for mental health and learning disability patients. Where applicable, the MHSDS has incorporated the data requirements of the Learning Disabilities Census and Assuring Transformation in order to reduce burden on providers with regard to multiple data flows.

NHS Data Model and Dictionary

“The NHS Data Model and Dictionary provides a reference point for approved Information Standards and Collections (including Extractions) (ISCEs) to support health care activities within the NHS in England. It has been developed for everyone who is actively involved in the collection of data and the management of information in the NHS.” ([Data Dictionary web site](#)) Data Dictionary maintains a repository of data item criteria which go through a strict process for change. On occasion data items will require change in response to policy or clinical imperative, or in order to facilitate requirements in relation to data sets other than MHSDS that use the data item. This has led to the requirement for a number of former MHLDDS data items to be uplifted to conform to the NHS Data Model and Dictionary. For example ‘Sex of Patient code’, code 8 amended from ‘Either sex’ to ‘Not Specified’.

2.2 Change Control

The *Data Set Specification* fully defines the individual changes applied to the data set, with each change logged in the *Change Control* tab.

This *Change Specification* therefore represents a summary of changes to the MHLDDS v1.1 data set which should be read in conjunction with the *Summary of Changes* tab in the *Data Set Specification* to fully understand the changes to the data set.

A summary of changes follows below.

N.B. a second version of the technical specification is published with other supporting documents on the HSCIC MHSDS web page. This document is called the [Technical Output Specification \(TOS\)](#). It includes all elements of the Data Set Specification as published by SCCI and also includes additional information relating to inclusion rules, validation, derivations and diagnostics, which is supplied for the information of stakeholders but is not part of the ISN.

2.3 Expansion of scope

In order to incorporate the collection of CAMHS data within this Information Standard, an expansion of the scope was required.

The exclusion of activity for children and adolescents under the age of 18, except where they are in receipt of care from a specialist adult secondary mental health, learning disabilities or autism spectrum disorder service or an adult early intervention service, has been removed.

2.4 New tables

The development of the MHSDS involved significant restructuring in support of the requirement to measure waiting times in various mental health disciplines. This has resulted in changes to a significant number of tables including the addition and deletion of some tables. The changes are summarised below, and fully defined in the Data Set Specification Change Control tab.

A number of new tables have also been added to facilitate the collection of new information:

- MHS000 MHSDS Header
- MHS002GP
- MHS005 Patient Indicators
- MHS103 Other Reason for Referral
- MHS104 Referral to Treatment
- MHS105 Onward Referral
- MHS202 Care Activity
- MHS203 Other in Attendance
- MHS204 Indirect Activity
- MHS301 Group Session
- MHS601 Medical History (Previous Diagnosis)
- MHS603 Provisional Diagnosis
- MHS608 Anonymous Self-Assessment

The changes are fully defined in the Data Set Specification Change Control tab.

2.5 New Items in existing/amended tables

A large proportion of new items within the data set are resultant of restructuring requirements. The changes are fully defined in the Data Set Specification Change Control tab.

A number of new items have also been added to collect new information:

MHS001 Master Patient Index

- Postcode of Main Visitor
- Language Code (Preferred)
- Person Death Date

MHS002 GP Practice Registration

- Start Date (GMP Patient Registration)
- End Date (GMP Patient Registration)

MHS005 Patient Indicators

- Constant Supervision And Care Required Due To Disability Indicator
- Young Carer Indicator
- Looked After Child Indicator
- Child Protection Plan Indication Code

MHS006 Mental Health Care Coordinator

- Care Professional Service Or Team Type Association (Mental Health)

MHS101 Service or Team Referral

- Referral Request Received Time
- NHS Service Agreement Line Number
- Referring Organisation Code
- Referring Care Professional Staff Group (Mental Health and Community Care)
- Clinical Response Priority Type
- Primary Reason for Referral (Mental Health)
- Discharge Letter Issued Date (Mental Health and Community Care)

MHS102 Service or Team Type Referred To

- Child and Adolescent Mental Health Tier Of Service
- Referral Closure Reason
- Referral Rejection Reason

MHS201 Care Contact

- Administrative Category Code
- Consultation Type
- Group Therapy Indicator
- Earliest Reasonable Offer Date

- Earliest Clinically Appropriate Date
- Care Contact Cancellation Date
- Care Contact Cancellation Reason
- Replacement Appointment Date Offered
- Replacement Appointment Booked Date

MHS501 Hospital Provider Spell

- Start Time (Hospital Provider Spell)
- Source of Admission Code (Hospital Provider Spell)
- Planned Discharge Date (Hospital Provider Spell)
- Discharge Time (Hospital Provider Spell)
- Discharge Destination Code (Hospital Provider Spell)

MHS502 Ward Stay

- Start Time (Ward Stay)
- End Time (Ward Stay)
- Ward Setting Type (Mental Health)

MHS505 Restrictive Intervention

- Restrictive Intervention Type

Start and End Times have been added to the following tables:

- MHS509 Home Leave
- MHS510 Mental Health Leave of Absence
- MHS511 Mental Health Absence Without Leave

To allow a choice of diagnosis scheme to be used to submit diagnosis data, Diagnosis Scheme in Use has been added to the following tables:

- MHS601MedHistPrevDiag
- MHS603ProvDiag
- MHS604PrimDiag
- MHS605SecDiag

MHS801 Clustering Tool

- Clustering Tool Assessment Category
- Child and Adolescent Mental health Care cluster Code (Initial)
- Learning Disabilities Care Cluster Code (Initial)
- Forensic Mental Health Care Cluster Code (Initial)

- Forensic Learning Disabilities Care Cluster Code (Initial)

MHS803 Care Cluster

- Child And Adolescent Mental Health Care Cluster Code (Final)
- Learning Disabilities Care Cluster Code (Final)
- Forensic Mental Health Care Cluster Code (Final)
- Forensic Learning Disabilities Care Cluster Code (Final)

MHS901 Staff Details

- Professional Registration Body Code
- Professional Registration Entry Identifier
- Care Professional Staff Group (Mental Health)

The changes are fully defined in the Data Set Specification Change Control tab.

2.6 Amendments to existing data tables/items

A number of data items have been amended as part of restructuring requirements. The changes are fully defined in the Data Set Specification Change Control tab.

Further amendments have been made to code lists in response to other requirements, for example: to capture changes in clinical practice and assist providers with mapping:

MHS101 Service or Team Referral

- Source of Referral for Mental Health

Two data items based on the MHLDDS data item Adult Mental Health Care Team Type:

MHS102 Service or Team Type Referred to

- Service or Team Type Referred to

MHS006 Mental Health Care Coordinator

- Care Professional Service or Team Type Association

MHS201 Care Contact

- Activity Location Type Code

MHS401 Mental Health Act Legal Status Classification Period

- Mental Health Act Legal Status Classification Assignment Period Start Reason
- Mental Health Act Legal Status Classification Assignment Period End Reason

MHS504 Mental Health Delayed Discharge

- Mental Health Delayed Discharge Reason

MHS803 Care cluster

- Adult Mental Health Care Cluster (Final)

The changes are fully defined in the Data Set Specification Change Control tab.

2.7 Deletions

A number of MHLDDS tables and their included items have been retired in correlation with the move to a referral-contact-activity based structure:

6 - Mental Health Team Episode (TEAMEP)

7 - NHS Day Care Episode (DAYEP)

8 - Consultant Outpatient Episode (OPEP)

9 - Acute Home-based Care Episode (HBCAREEP)

10- Mental Health NHS Care Home Stay Episode (NHSCAREHOMEEP)

12 - Inpatient Episode (INPATEP)

20 - NHS Day Care Facility Attendance (DAYATT)

46 - Commissioner History (COMMHIST)

A number of data items have been retired following review:

MHS001 Master Patient Index

- Person Marital Status
- Year Of First Known Psychiatric Care

MHS101 Service or Team Referral

- Referral Request Status Date
- Status Of Service Request (Mental Health)

MHS502 Ward Stay

- Intended Age Group

MHS803 Care Cluster

- Mental Health Care Cluster End Reason

The changes are fully defined in the Data Set Specification Change Control tab.

2.8 Retirement of other Information Standards

As a result of the changes to this Information Standard, specified above, the following separate Information Standards are to be retired:

Reference	Title
ISB 1072 Amd 30/2012	Child and Adolescent Mental Health Services Data Set
ISB 1509 Amd 15/2013	Mental Health Care Cluster
ISB 1078 Amd 14/2013	Mental Health Clustering Tool

Information requirements for the CAMHS Data Set are to be met by the MHSDS and a separate flow of CAMHS data through the CAMHS Data Set is no longer necessary.

The Mental Health Care Cluster and Mental Health Clustering Tool Information Standards are to be retired. Standalone Information Standards for these are no longer required and requirements will be fully met within the MHSDS Information Standard.
