

Corrigendum

Standard	DAPB2007 Assuring Transformation
Release	Amd 18/2022 Version 4.0
Date of ISCE publication	31 August 2023
Date of Corrigendum	28 November 2023

Background

Version 4.0 of Assuring Transformation was published on 31 August 2023.

Since then, the need for corrections to the data set have been identified. A summary is provided below.

Note that there is no impact on the published Requirements Specification, Change Specification, or the Implementation Guidance.

However, an updated Data Set Specification has been issued and should be read in conjunction with this Corrigendum.

Summary

Two corrections are required across the **Data Set Specification** as follows:

- Options for data item “Q42a Details of a patient’s care plan” have changed from:
 - 6 - Clinically ready for discharge
 - to
 - 10 - Clinically ready for discharge

The format of the data item has changed from an1 to max an2 to accommodate the new code.

Context:

From version 3.0 to version 4.0, the definition of code 6 changed from “Delayed transfer of care: no community option or onward placement available or deliverable” to “Clinically ready for discharge”. Patients previously recorded as “6 - Delayed transfer of care” need to be reclassified as either “6 - Clinically ready for discharge” or “8 - Clinically suitable for transfer”. This reclassification has not always occurred. To resolve this, and to prompt the required reclassification, a decision has been made to retire code 6 and introduce a new code, 10 for “Clinically ready for discharge”.

2. The following line has been removed from the additional information for “Q25 - Is the patient eligible for a Care, (Education) and Treatment Review (C(E)TR)?”:
 - “A patient should be assumed to be eligible for a C(E)TR unless established otherwise.”

More information

The controlled version of this Corrigendum is published alongside the current publication documents on the NHS England website:
