

# MULTIPLE MYELOMA DATA SHEET

## REVISED INTERNATIONAL STAGING SYSTEM (R-ISS)

| Stage   | Description  |
|---|--|
| Stage 1   | Early-stage myeloma. Pts with ISS-1 (serum $\beta_2$ -microglobulin level <3.5 mg/L and serum albumin level $\geq$ 3.5 g/dL), no high-risk cytogenetic abnormalities in iFISH [such as del(17p) and/or t(4;14) and/or t(14;16)] and normal LDH levels (below the upper limit of normal). |
| Stage 2   | Intermediate-stage myeloma. <b>Not</b> R-ISS Stage 1 <b>or</b> Stage 3   |
| Stage 3   | Advanced myeloma. Pts with ISS-3 (serum $\beta_2$ -microglobulin level >5.5 mg/L) <b>and</b> either high-risk cytogenetic abnormalities in iFISH <b>or</b> elevated LDH levels.  |
| The R-ISS is based on the assessment of: beta 2-microglobulin ( $\beta_2$ -M), albumin, iFISH, (interphase fluorescence <i>in situ</i> hybridization) and LDH (lactate dehydrogenase) |  |
