Design Changes

This document is intended as a high-level summary to be used to form the basis of further analysis and investigation, rather than a comprehensive list of all differences between releases. Further supporting documentation is available from the National Casemix Office website <https://digital.nhs.uk/services/national-casemix-office>.

Changes to the PSS Tool

The following changes have been implemented between the **PSS 2023/24 Operational Tool** and the **PSS 2024/25 Planning Tool**.

This Build represents a significant change from the **PSS 2023/24 Operational Tool** and the specific design updates to the Identification Rules are listed below.

It is also advised that users review the **PSP 2024/25 Prescribed Services Guide to Identification Rules** to give both a summary and detailed level of these changes.

Input Changes

There have been no changes to the inputs.

Output Changes

There have been no changes to the outputs.

Software Changes

The Visual Studio Runtime component that is included in the installation wrapper has been updated from version 14.34.31931 to 14.38.33130.

This update has been made to ensure that the latest Microsoft Visual C++ Redistributable package is installed, ensuring compatibility with security and stability fixes that Microsoft have put into the runtime libraries. This package installs Microsoft C and C++ runtime libraries which the tool requires.

For further information around Microsoft Visual C++ Redistributable please see the link below:
